SELL MORE

Sell nights, days or hours with the help of Logus HMS.

There is an opportunity to sell sell days and/or beds

Dynamic packages allow avoiding many similar rate plans.

Booking a Room Type (not a particular Room Number) offers a lot of opportunities for hotels in Logus HMS, for example, to make rooms occupied with equal frequency. It allows to reserve more rooms and avoid room fragmentation by decreasing free spaces in Occupancy.

This technology may increase revenue up to

10-12%
during high season

Booking a room type vs a certain room number

PLAN YOUR REVENUE

Logus HMS implements your pricing strategy. You can create flexible sales policy with a single rate plan depending on a day of week, length of stay or seasons.

Manage overbooking, open and closed rates to increase your revenue in each and every season.

BUSINESS AT A GLANCE

Module "Manager Console"

You can review key statistics of your hotel from any place in the World using any mobile device you like.

 Revenue Increase

 Optimization

Housekeeping Management in Logus HMS includes cleaning tasks and schedules using internal standards both in occupied and vacant rooms. The system allows to quickly distribute all tasks equally among Housekeepers and to prepare reports of services finished by every maid in order to calculate bonuses according to a hotel's policy.

Cleaning Schedules

Even work load for Housekeepers

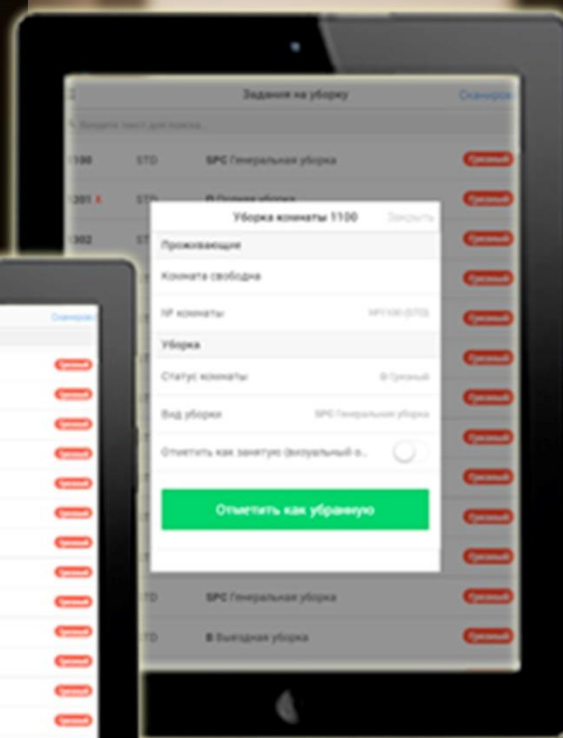

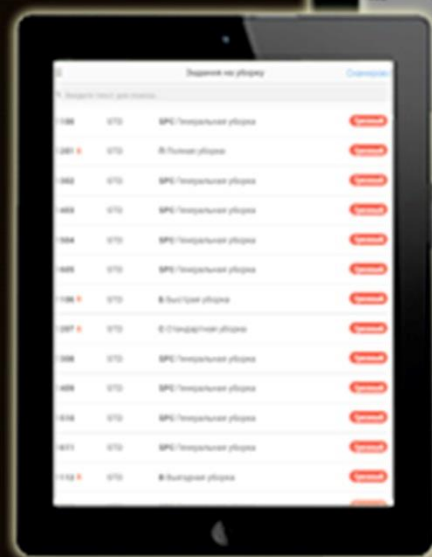

Consumables management

➔ Optimization

MOBILE HOUSEKEEPING

You can view Housekeeping tasks and change rooms' statuses using a tablet or smart phone.

➔ Optimization

FOOD CONTROL

You can use tablet devices instead of lists on paper when meeting and greeting your guests at a restaurant.

MAINTAINING B2B PARTNER DATABASE

Logus HMS allocates a quota of rooms for your partners, making it easier to manage contractual terms.

A two-way integration to Accounting 1C automatically transfers all provided services to 1C and gets Direct Billing payments back from Accounting.

→ Optimization

FAST GROUP BOOKING MANAGEMENT

The Group Module allows to work with Room Blocks for non-guaranteed groups and quickly converts them into reservations.

Logus HMS reports help to monitor Group Blocks and Group Bookings to make unused blocks available in timely manner, generate rooming lists, group confirmations, etc.

KEY SYSTEMS INTEGRATION

Logus HMS integration to a Key Services System helps to avoid fraudulent check-ins and other abusive actions.

Logus HMS integration to a Key Services System will not create a key without a reservation.

Safety

ONLINE SALES

Logus HMS integration to a Booking Engine on a hotel's Website as well as interfacing to the Channel Manager (a specific module to control room quotas and prices available for booking via different sales channels such as Booking.com, Expedia, HRS, etc.) helps to manage Reservation Agents' time and boost hotel's income by using WEB-loyal market segment.
